

Workshop & Talk Event
Creating a Future-Oriented Coastal Community
—For the Coexistence of Humans and the Ocean

Tohoku's coastal regions are facing various challenges, including climate change, natural disasters, and population shifts that influence fisheries and cultural activities. In response, experts, students, and the general public are coming together for a workshop to explore and share ideas on how people and the ocean can coexist sustainably. Through dialogues spanning environment, culture, and society, this event offers a chance to spark fresh ideas for ocean-related research and coastal communities and to connect with new collaborators.

The talk session, featuring experts from diverse fields—including ocean physics, ecology, cultural anthropology, socioeconomics, and the fisheries industry—who will discuss key challenges and possible solutions (as part of the workshop open to the public), can also be attended online.

For more information or to apply, please visit:

<https://wpi-aimec.jp/en/event/1600/>

Audience:

University students, graduate students, high school students, the general public, and experts interested in other fields.

Date & Time:

Saturday, February 22, 2025

-Workshop (in-person, in Japanese): 09:30–18:00

-Talk Event (hybrid, with Japanese-English interpretation): 10:30–13:00

Venue:

Seminar Room (2F), Advanced Institute for Materials Research (WPI-AIMR),
Katahira Campus, Tohoku University
